**Today's Topics**

1. General advice
2. All about cropping
3. Using the editing tools
4. Working with movies

## 1. General advice

-  Make a duplicate first!
-  Use the Magic Wand (Auto Enhance)

## 2. All about cropping

-  You can crop freehand
-  You can crop with fixed aspect ratios
-  You can mirror (flip) an image
-  You can't adjust perspective (but you could on your iPhone)

### Exercise 1

Crop and straighten image  
Flip horizontally  
Magic Wand/Auto Enhance  
Adjust White Balance  
Change color of wall  
Adjust Light and Color overall  
Remove imperfections with Retouch tool  
Make your whites whiter and your blacks blacker

### Keyboard Shortcuts

**A** for Adjust  
**F** for Filter  
**C** for Crop  
**M** for Make sure you remember how the image used to look

## Exercise 2

Use what you just learned to change the color of the orange flowers without changing anything else.

## Exercise 3

Copy the adjustments from the image in Exercise 2 and paste them into another image.

## 3. Using the editing tools

- 🌈 Not sure where to start? Try cropping.
- 🌈 Use Auto Enhance *as a starting point*.
- 🌈 Sharpness is for *edges*. Definition is for *regions* (skin, fabric, sky, water)
- 🌈 Brilliance adjusts *lighting* where needed.

### Exercise 4

Photos has special adjustments for black and white photos. Let's use them, and Sharpen, and Levels/Luminance to improve this famous photo. Shadows too, maybe.

## Exercise 5 (Portrait Mode)

Experiment with different lighting modes (I chose “Contour”)

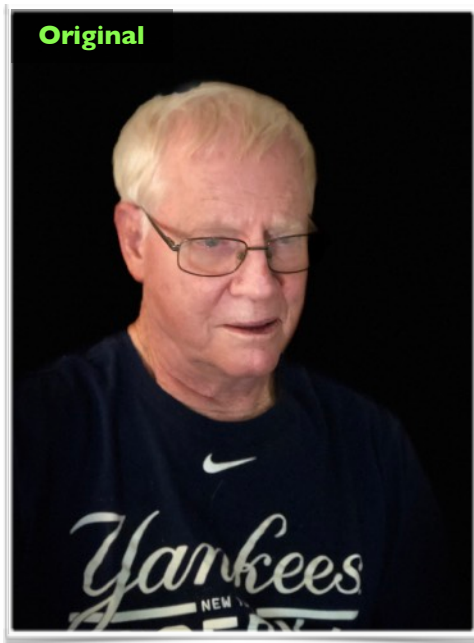

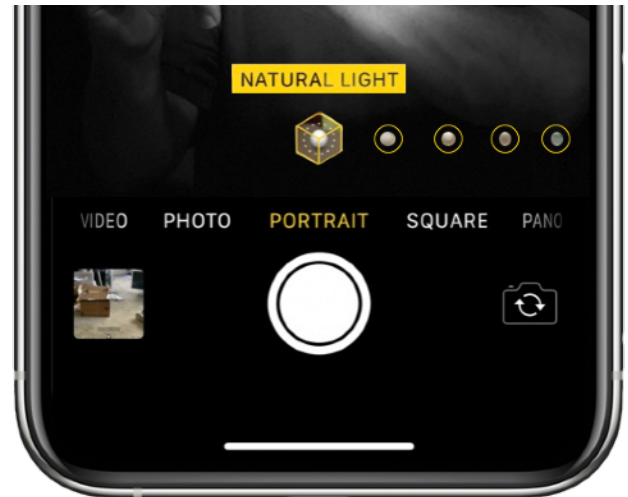

Sharpen

Crop

Remove logo from shirt (Retouch)

Vignette

*Bonus:* We can add a smile after the fact!

## Exercise 6 (Portrait Mode again)

This image is from a newer iPhone, which takes better Portrait Mode pictures. Notice the Depth control when we go to Edit.

Change depth of field (blur the background more).

Switch to Contour lighting.

Remove a few freckles, and crow's feet too.

## 4. Working with movies

- 🌈 All you can do with movies is trim them. Use yellow handles to show start and stop points. Revert to Original in Edit mode to get back what you trimmed. (The iPhone does more with movies than the Mac does.)
- 🌈 You can export a frame from the movie... **to the Pictures folder!** Don't look for it in Photos, it's not there (but you can drag it in).

Pictures

### Exercise 7

Remove the shaky beginning and end of this movie.

Scan through the movie frame by frame and export one frame to your Pictures folder.
